# Student Housing Managed Wi-Fi

Modern, Seamless Connectivity

Our approach to onboarding students to the Wi-Fi network is innovative, modern, and easy to use. Our service, enabled by SolutionIP FLEX®, allows for ubiquitous network connectivity, giving students access to their "personal" network and devices from anywhere on campus with network coverage.

Alleviate IT Staff Burden

Our Private Network Group (PNG) functionality helps alleviate IT staff burden while giving students the "seamless" experience they desire.

Students can easily onboard and manage their devices, minimizing the need to assist end users.

Seamless Roaming

Allow your students to roam your campus while remaining on the network, ensuring they never have to reconnect.

Or allow students continuous access to their PNG campus-wide to ensure ease-of-use while encouraging facility usage.

Hardware Agnostic

Our software is hardware agnostic, allowing us to provide feature-rich functionalities on any existing network infrastructure.

Overlay on Existing Network

SolutionInc's service can overlay on the existing university network infrastructure in the residences to provide each student with an "at home" Wi-Fi experience.

Added Security

Providing students with their own PNG ensures that they have a secure space for all their devices, separate from other users on the network.

Support for You & Students

- 24/7/365 live monitoring
- Pre-arrival documentation and how-to videos for students
- Technical Support – critical issues, system management, service monitoring, and optional end-user phone support.
