THE BUSINESS OF PUBLIC WIFI

Providing an affordable access solution that provides stable and forward thinking alternatives is important to any public venue. Use free WiFi access to drive traffic to slow areas, provide access codes at visitor information centres to increase engagement, promote businesses using WiFi marketing solutions, or offer mobile transit hot-spots to allow commuters time to work.

ALTERNATIVE SOLUTIONS FOR DIFFICULT LOCATIONS

Whether your park is in a remote area, your boardwalk features difficult weather patterns, or your venue requires high-throughput for short periods of time, we will create a network solution that fits your needs. We have extensive experience with complex deployments and our team is educated in providing the right solution your unique circumstances.

PROFESSIONALLY INSTALLED, MANAGED AND MONITORED

Our optional User Support Services provide your guests with a 24/7/365 help desk to help them get connected. Also consider adding our Technical Support Services to ensure that your team members on the ground always have access to technical assistance to ensure maximum uptime and a timely remedy for issues, keeping your guests connected and happy.

Solution Benefits

Public WiFi Solutions for Cities, Parks and Attractions

IMPLEMENT NEW IOT TECHNOLOGIES

Allow us to assist you in following the “smart city” movement by providing your vendors, staff and public with the advantage of implementing smart technologies. These could include smart lights, sensors, parking systems, or traffic monitors, improving your city operations.

You have control over the branding and messaging of your platform. Everything from the look and feel, to welcome messaging, advertising, languages, and so much more. Increase awareness of your brand by ensuring social WiFi connectivity for your guests.

LANGUAGE AND ACCESSIBILITY

Ensuring fair access to those with impairment or language barriers is important for any public WiFi system. We provide accessibility and language options to ensure everyone can get online to meet inclusivity standards and practices.

Ensuring that your WiFi and network hardware is out of sight and cost effective is important to us. We will ensure that the beauty and prestige of your area is not overridden with technical equipment and gear.

SECURITY WITH YOUR NETWORK

A public breach is awkward and decreases trust, which is detrimental to future planning. That is why our team members ensure network security tools operate effectively and IoT devices are logically segregated to avoid the likelihood of a network breach.
